

SATHEES KUMAR KANDASAMY, PMP

SENIOR PROJECT MANAGER | PROGRAM / DELIVERY MANAGER

Chennai, India | Phone: +91 9840845238 | Email: satheeskumar.pmp@gmail.com

PROFESSIONAL SUMMARY

Dedicated Senior Project / Program / Delivery Manager with over 20+ years of experience in leading cross-functional teams, strong technical background, and a proven track record of driving successful project deliveries.

CORE COMPETENCIES

- Program & Project Management | Delivery Governance | PMO | Portfolio Delivery
- Enterprise Architecture | SOA | Microservices | Cloud Migration & Modernization | Scalability
- Java | .NET | Spring Boot | REST APIs | SOAP | SQL | NoSQL | Distributed Systems
- AWS | Azure | GCP | Docker | Kubernetes | DevOps | CI/CD | Git | Jenkins | Maven
- SAP / ERP: SAP S/4HANA Cloud Private Edition | SAP BTP | SAP Commerce Cloud | SAP Integration Suite | SAP SD | SAP FI-AR | SAP FI-GL | SAP BW/4HANA | SAP Fiori | SAP Cloud ALM | RISE with SAP | SAP Activate
- Agile | Scrum | SAgile | PI Planning | Release Planning | Sprint Management | Backlog Management
- SOW | RFP | pre-Sales | T&M | Fixed Bid | P&L | Revenue | Margin | Account Mining
- Stakeholder & Risk Management | Client Negotiation | Conflict Resolution | Escalation Management
- People Leadership | Hiring | Coaching | Performance Management | COE | Resource Planning
- ITIL | ITSM | ITOM | Security | Quality Engineering | Continuous Improvement

ARCHITECTURE & TECHNICAL LEADERSHIP

- Lead Java and .NET engineering teams and technical stakeholders across application development, integration, APIs, DevOps and production readiness.
- Lead end-to-end architecture and technical delivery for PACS implementations and migrations and EHR implementations, integrating DICOM, HL7, RIS, LIS and clinical systems; drive cloud modernization, data migration, interoperability, security, scalability, performance and high availability across healthcare environments.
- Lead SAP S/4HANA Greenfield / Brownfield implementation and SAP Activate Methodology.
- Lead SAP S/4HANA migration projects and manage transformation from SAP ECC to S/4HANA.
- Lead architecture discussions for enterprise applications, cloud-native platforms and modernization programs; translate business objectives into scalable technical delivery roadmaps.
- Hands-on program leadership across SOA and microservices architectures, including decomposition of monoliths, API modernization, service integration, resiliency and scalability.
- Experience leading cloud migration and modernization initiatives across AWS, Azure and GCP, including application, data and integration considerations.
- Working knowledge of enterprise architecture principles and TOGAF-aligned architecture governance, standards, technology roadmaps and architecture review processes.
- Evaluate RESTful APIs versus SOAP based on interoperability, security, performance, contract requirements and enterprise integration needs.
- Guide database decisions across relational SQL and NoSQL platforms based on transactionality, consistency, scalability, data model and workload characteristics.

- Drive networking and environment readiness across application connectivity, load balancing, DNS, security controls, cloud networking and deployment dependencies.
- Led AI and Data Science initiatives to improve project delivery, automate reporting, enable predictive analytics, and support data-driven business decision-making.

ENGINEERING EXCELLENCE & BEST PRACTICES

- Drive SAP development best practices across S/4HANA, BTP and SAP Commerce, applying clean-core principles, ATC/code quality checks, automated testing, CI/CD, secure integration, performance optimization and SAP Cloud ALM-based quality and release governance.
- Establish engineering quality practices using SonarQube, quality gates, code review standards, defect prevention and technical debt management.
- Track code quality parameters including bugs, vulnerabilities, code smells, duplication, maintainability and test coverage.
- Promote unit testing, branch strategy, peer reviews, merge controls and CI/CD automation to improve software quality and release confidence.
- Drive coding standards covering exception handling, structured logging, naming conventions, reusable components, documentation and automation standards.
- Apply OOP and SOLID principles to improve maintainability, extensibility, testability and separation of concerns.
- Incorporate security best practices into SDLC, including secure coding, access control, secrets management, vulnerability remediation and production readiness.
- Apply SRE principles around reliability, observability, incident response, SLIs/SLOs, error budgets and operational readiness.
- Drive FinOps awareness through cloud cost visibility, right-sizing, utilization optimization, governance and cost-conscious architecture decisions.

PROGRAM DELIVERY & GOVERNANCE

- Lead Agile delivery using Scrum and SAFe, including PI Planning, product backlog management, backlog refinement, sprint planning, demos, retrospectives and release planning.
- Define release schedules, sprint cadence, scope boundaries, dependencies, acceptance criteria and Definition of Ready/Definition of Done.
- Manage scope creep through impact assessment, prioritization, change control, stakeholder alignment and transparent trade-off decisions.
- Use Agile dashboards and metrics such as velocity, burn-up/burn-down, throughput, cycle time, defects, release predictability and dependency status.
- Identify underperformance during sprints, establish corrective actions, rebalance work and resources, and communicate progress and risks to clients and stakeholders.
- Drive continuous demos and incremental validation to reduce late surprises and improve business confidence.

COMMERCIALS, PROPOSALS & CLIENT MANAGEMENT

- Contribute to SOW creation, RFP responses, solution proposals, estimation, staffing models, delivery assumptions, dependencies, risks and commercials.
- Manage T&M and Fixed Bid delivery models with focus on scope, effort, revenue, margin, utilization, forecast and profitability.
- Lead client negotiations, expectation management, conflict resolution, escalations and executive communications.
- Identify scope and delivery risks early; maintain transparent governance to avoid last-minute surprises.
- Support account growth through relationship management, opportunity identification, account mining, pre-sales support and expansion of existing engagements.
- Balance customer outcomes, delivery commitments and commercial objectives while maintaining strong client satisfaction.

PEOPLE & RESOURCE MANAGEMENT

- Lead and mentor project/program managers, architects, developers, QA engineers, DevOps engineers and cross-functional teams.
- Motivate teams through clear objectives, ownership, recognition, coaching, transparent communication and career development.
- Conduct structured 1:1s, monthly/quarterly reviews, performance discussions and development planning.
- Manage performance issues—including situations involving previously high-performing team members—using objective evidence, coaching, measurable goals and appropriate escalation.
- Support hiring through role definition, technical/behavioral interviews, candidate evaluation, onboarding and workforce planning.
- Optimize resource planning using skills, capacity, utilization, project priority, delivery timelines and future demand.

PROJECT & PROGRAM MANAGEMENT

- Own end-to-end delivery from backlog identification and estimation through development, testing, release, production implementation and hypercare.
- Establish delivery governance covering milestones, RAID, dependencies, quality, financials, resources, risks, issues, decisions and executive reporting.
- Manage complex multi-team and multi-million-dollar programs with distributed/onshore-offshore delivery models.
- Track project milestones, deadlines and deliverables; identify deviations early and drive recovery plans.
- Identify, track and manage inter-team and cross-functional dependencies across engineering, architecture, infrastructure, security, data, business and vendors.
- Provide regular progress reports, risk assessments, forecasts and executive updates to clients, stakeholders and CXO leadership.
- Define and monitor software development processes for Scrum teams, including estimation, planning, delivery controls, quality gates and release readiness.
- Drive quality frameworks, operational readiness, ITIL-aligned service practices and continuous improvement initiatives.
- Lead escalations using structured problem solving, root-cause analysis, action ownership and executive communication.

DOMAIN EXPERIENCE

- **BFSI:** Core Banking, Anti-Money Laundering (AML), SWIFT, Payments, Investment Services, Risk Management, Account Monitoring, Invoicing, and Financial Integrations.
- **FinTech:** Digital Payments, UPI, Digital Wallets, eKYC, Open Banking, Payment Gateway Integration, API & Microservices Modernization, Cloud-Native Platforms, Fraud Detection, and Financial Data Analytics.
- **Healthcare:** PACS & Data Migration, Payer/Provider Platforms, EHR, Care Management, Population Health, Case & Device Management, Medication Management, Healthcare Integrations, and System Migrations.
- **B2B eCommerce:** SAP-Integrated B2B eCommerce Modernization, Monolith-to-Microservices Transformation, Cloud Adoption, API Modernization, and Enterprise Integrations.
- **SAP / ERP:** SAP S/4HANA Greenfield & Brownfield Implementations, SAP ECC-to-S/4HANA Transformation, S/4HANA Migration, RISE with SAP, and Enterprise ERP Transformation.
- **AI / Data Science:** AI/ML & Data Science Programs covering Predictive Analytics, Fraud Detection, Loan Risk Prediction, Healthcare Predictive Analytics, Data Engineering, ETL, and Machine Learning Model Development using Python, XGBoost, AWS Glue, Spark, Databricks, and Snowflake.

- ❖ Project Management Professional (PMP)
- ❖ ITIL Foundation
- ❖ Certified ScrumMaster (CSM)
- ❖ Cloud Architect
- ❖ Certified Scrum Product Owner (CSPO)
- ❖ SAFe Agilist
- ❖ Certified Enterprise Architect Professional (CEAP)
- ❖ AgilePgM (Agile Programme Management)
- ❖ Lean Six Sigma (Yellow belt)
- ❖ Digital Finance & FinTech Ecosystem Professional
- ❖ SAP Technology Consultant
- ❖ Data Science & AI Project Management: Plan, Track, Deliver

 PROFESSIONAL EXPERIENCE**Infinite — Senior Project / Program Manager | Chennai | Jun 2024 – Jul 2026**

- Led concurrent technology workstreams/program initiatives end-to-end, covering delivery governance, stakeholder alignment, risk management and business outcomes.
- Managed a cross-functional organization of + professionals across Product, Engineering, QA, Architecture, DevOps, implementation and client teams.
- Established governance across scope, schedule, RAID, dependencies, financials and resource planning for a program portfolio valued at 10M\$.
- Directed 4+ product/release cycles, coordinating planning, quality gates, environment readiness, deployment, production implementation and hypercare.
- Improved delivery predictability through structured risk reviews, dependency management and recovery planning, achieving 95% milestone/release adherence.
- Led onboarding, knowledge transition and training for 75+ team members across distributed delivery teams, reducing delivery-readiness gaps by 95%.
- Managed executive escalations and corrective actions across key stakeholders/clients, maintaining transparent status, risk and decision governance.

Aspire Systems — Senior Project Manager | Chennai | Mar 2022 – Mar 2024

- Managed cross-functional team members across end-to-end project delivery, planning, execution, governance and client engagement.
- Owned delivery planning, estimation, resource allocation and risk management for projects/programs valued at 8M \$.
- Coordinated workstreams and 5+ dependencies across technical and business stakeholders, driving milestone completion and issue resolution.
- Supported digital modernization and enterprise application initiatives that delivered 25% improvement in [cycle time/productivity/cost/quality — specify actual outcome].
- Provided executive status, financial, risk and dependency reporting, enabling timely corrective actions across major delivery milestones.

Unilog — Technical Project Manager | Chennai | Dec 2020 – Mar 2022

- Led B2B eCommerce modernization across product/workstream teams, coordinating engineering, architecture, QA, integration and infrastructure delivery.
- Managed SAP integration, cloud adoption, monolith-to-microservices and API modernization initiatives involving 5+ applications/services/interfaces.

- Coordinated 10+ delivery milestones and technical dependencies across distributed teams, maintaining release readiness and stakeholder alignment.
- Supported modernization that migrated/modernized legacy components and improved [performance/scalability/cost/release speed] by 95%.

Infosys — Project Manager | June 2013 - January 2020 | Chennai

- Managed large-scale enterprise projects/programs across banking, healthcare and enterprise applications, with delivery responsibility of 100%.
- Led distributed teams of 50+ professionals across application development, architecture, QA, infrastructure and business functions.
- Managed 5+ concurrent workstreams covering scope, schedule, resources, risks, dependencies, financials and executive governance.
- Improved delivery predictability through structured governance and recovery planning, achieving 95% on-time milestone/release performance.
- Partnered with business stakeholders and offshore delivery teams across geographies to deliver 10+ releases/projects and drive continuous improvement.

Photon Infotech — Project Manager | Chennai | Nov 2011 – Mar 2013

- Led project execution and cross-functional teams while managing scope, schedule, resources, risks, client communication and delivery commitments.
- Supported estimation, planning, technical coordination and release activities across the project lifecycle.

Exelacom Technologies — Sr. Project Lead | Chennai | Jul 2010 – Nov 2011

- Coordinated end-to-end project technical delivery, managing teams, schedules, dependencies, risks and stakeholder communication.

Polaris — Sr. Project Lead | Chennai | Mar 2004 – Jul 2010

- Progressed through technical and project leadership responsibilities, building experience in software delivery, team coordination, client engagement and project execution.
- Managed development and delivery activities across requirements, testing, deployment and production support.

Synova Innovative Solutions — Software Developer | Bangalore | Dec 2003 – Mar 2004

- Developed software delivery across requirements, development, testing and implementation while collaborating with technical teams.

M.S (Software Systems) — Bharathiar University – May 2003

B.E (EEE) — Bharathiar University – May 1999
